### ***ESCO has been certified in OHSAS 18001:2007***

13 December 2010, Aston PA

Engineered Arresting Systems Corporation (ESCO) has been awarded certification to the international standard for Occupational Health & Safety - OHSAS 18001:2007, and recertification to the ISO 9001:2008 Quality Management System and ISO 14001:2004 Environmental Management System.

The certification audit of ESCO conducted by the recognized internationally recognized certification agency URS, LLC (United Registrar Services, LLC) was completed successfully the week of November 29, 2010. The registration certificate issued to ESCO, its staff competence, procedures, processes and practices comply with the internationally recognized standards. The OHSAS 18001:2007 certificate confirms that the company has built the management system assuring compliance with the law as the monitoring of operational and professional risks are conducted regularly. ESCO manages these risks, protecting its employees safety and health while on the job.

“The attainment of the OHSAS 18001 certificate represents another step in the continuous development of ESCO’s management systems. The decision to adopt this international standard reflects a determination to reduce all occupational health and safety risks in operations and to independently verify our programs through internationally recognized methods. “ESCO’s Health, Safety and Environmental performance record is already very good. Our intention is that the continuous verification program of OHSAS 18001 will further enhance our performance”, stated Spencer Hoos, ESCO, President & CEO.

Geoff Fowler, ESCO Director of Quality Assurance & Continuous Improvement added “The OHSAS 18001:2007 became the third management system implemented and certified at ESCO. The continuous improvement of these very complex business management systems demonstrates ESCO’s commitment to achieving a “world class” level of performance. This success would not have become possible without the on-going support of the entire ESCO team who continue to raise the company to the highest level of operational excellence”.

#### **About Engineered Arresting Systems Corporation**

For more than 50 years, Engineered Arresting Systems Corporation, a division of Zodiac Aerospace, has harnessed mechanical energy to provide customized arrestment and containment solutions for aircraft and transport vehicles. To learn more, visit: <http://www.esco.zodiacaerospace.com>
